XIUS-bcgi Upgrades INfinet Prepaid Solution *New Features in Line with Industry Trends*

WOBURN, MA (June 30, 2010) XIUS-bcgi, provider of telecom solutions for mobile operators and MVNOs, has announced the market offering of the latest version of its INfinet prepaid solution.

XIUS-bcgi says its INfinet Prepaid solution is designed to be the service provider's central platform for real-time rating & charging, flexible plan offerings, and value-added services. The core principle behind the INfinet roadmap has always been to evolve services that facilitate the movement of funds in and out of the prepaid subscriber's account in line with the industry direction. Ten years ago, the emphasis was on real-time call control, bad debt reduction in prepaid roaming, and top-up. In the coming years, service providers will continue to engage in prepaid subscribers in growing ARPU and reducing operating expenses. The forms of engagement, says XIUS-bcgi, will center around real-time commerce control, and revenue generation through advertising and value-added services. Given that backdrop, XIUS-bcgi has developed INfinet v14 with many new features and enhancements.

The company says major investment and enhancements have been undertaken in the INfinet platform in the areas of advanced network/infrastructure support, Customer Care, Rating & Charging flexibility, and SelfCare.
